

PRESS RELEASE 23-13

MAY 10, 2023

GREENLAND RESOURCES SIGNS MOU / TERMS WITH MOLYMET IN THE PRESENCE OF THE PRIME MINISTER OF BELGIUM

TORONTO, ONTARIO -- (May 10, 2023) – Greenland Resources Inc. (NEO:MOLY, FSE:MOLY) (“Greenland Resources” or the “Company”) is pleased to announce that on the twenty year anniversary of Moly met Belgium and in the presence of Belgium Prime Minister Mr. Alexander De Croo and Mr. John Graell, CEO Moly met, the Company has signed a memorandum of understanding with binding terms (“MOU/Terms”) for long term sales and toll conversion of molybdenum concentrate with Molibdenos y Metales S.A (“Moly met”). Moly met is an international investment grade rated company with the world’s largest molybdenum processing capacity and sales with production facilities in Germany, Belgium, Mexico and Chile and sales offices in nine different countries. A communique from Moly met Belgium can also be found on: <https://www.moly metbelgium.be/nieuws/moly met-viert-twintigste-verjaardag-in-belgi%C3%AB-en-breidt-uit-nieuwe-fabriek-effent-het-pad-voor-verdere-groei>

The MOU / Terms set the path for the sales and tolling conversion of a significant part of the long-term production of the Malmbjerg Molybdenum Project concentrate, and contains both binding and non-binding clauses as well as detailed pro-forma terms and conditions. This MOU / Terms will give the Company the option to both sell its molybdenite concentrate to Moly met, and also to toll process only, and sell secondary products like ferromolybdenum, molybdenum oxide and ammonium dimolybdate directly to various steel and chemical companies. The Company has seen strong interest from large EU investment grade metallurgical steel and chemical companies to source molybdenum from Greenland, and has already signed documentation with many of them. As an example, see the Company’s January 19, 2023 press release <https://greenlandresources.ca/data/news/PR-23-04-Greenland-Resources-Jan-19-2023.pdf>

The Company thanks Moly met, the Prime Minister and EIT RawMaterials / ERMA who was also represented at the event. The event had coverage in various national newspapers and photos can be found in Greenland Resources website gallery.

About Moly met

Moly met is an international Chilean headquartered company with the largest molybdenum and rhenium processing capacity in the world. Having production facilities and sales offices in nine different countries allows Moly met to offer services and products on every continent. The company adheres to high environmental standards, supported by its environmental management system with ISO 14001, 45001 and 9001 certifications.

About Greenland Resources Inc.

Greenland Resources is a Canadian public company with the Ontario Securities Commission as its principal regulator and is focused on the development of its 100% owned world-class Climax type pure molybdenum deposit located in central east Greenland. The Malmbjerg molybdenum project is an open pit operation with an environmentally friendly mine design focused on reduced water usage, low aquatic disturbance and low footprint due to modularized infrastructure. The Malmbjerg project benefits from a NI 43-101 Definitive Feasibility Study completed by Tetra Tech in 2022, with Proven and Probable Reserves of 245 million tonnes at 0.176% MoS₂, for 571 million pounds of contained molybdenum metal. As the high-grade molybdenum is mined for the first half of the mine life, the average annual production for years one to ten is 32.8 million pounds per year of contained molybdenum metal at an average grade of 0.23% MoS₂. The project had a previous exploitation license granted in 2009. With offices in Toronto, the Company is led by a management team with an extensive track record in the mining industry and capital markets. For further details, please refer to our web site (www.greenlandresources.ca) and our Canadian regulatory filings on Greenland Resources’ profile at www.sedar.com.

The Project is supported by the European Raw Materials Alliance (ERMA) as stated in their press release [EIT/ERMA June 13, 2022 Press Release](#), a Knowledge and Innovation Community of the European Institute of Innovation and Technology (EIT), a body of the European Union.

About Molybdenum and the European Union

Molybdenum is a critical metal used mainly in steel and chemicals that is needed in all technologies in the upcoming green energy transition (World Bank, 2020; IEA, 2021). When added to steel and cast iron, it enhances strength, hardenability, weldability, toughness, temperature strength, and corrosion resistance. Based on data from the International Molybdenum Association and the European Commission Steel Report, the world produced around 576 million pounds of molybdenum in 2021 where the European Union ("EU") as the second largest steel producer in the world used approximately 25% of global molybdenum supply and has no domestic molybdenum production. To a greater degree, the EU steel dependent industries like the automotive, construction, and engineering, represent around 18% of the EU's ≈ US\$16 trillion GDP. Greenland Resources strategically located Malmbjerg molybdenum project has the potential to supply in and for the EU approximately 24 million pounds per year, of environmentally friendly molybdenum from a responsible EU Associate country, for decades to come. The high quality of the Malmbjerg ore, having low impurity content in phosphorus, tin, antimony, and arsenic, makes it an ideal source of molybdenum for the high-performance steel industry lead worldwide by Europe, specifically the Scandinavian countries and Germany.

Forward Looking Statements

This news release contains "forward-looking information" (also referred to as "forward looking statements"), which relate to future events or future performance and reflect management's current expectations and assumptions. Often, but not always, forward-looking statements can be identified by the use of words such as "plans", "hopes", "expects", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes" or variations (including negative variations) of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Such forward-looking statements reflect management's current beliefs and are based on assumptions made by and information currently available to the Company. All statements, other than statements of historical fact, are forward-looking statements or information. Forward-looking statements or information in this news release relate to, among other things: : the ability to negotiate with Molymet and enter into a definitive agreement for long term sales and / or toll conversion of molybdenum concentrate on terms and conditions that are economic or at all; the Company's objectives, goals or future plans, statements, exploration results, potential mineralization, the estimation of mineral resources and reserves, and their valuation, exploration and mine development plans, timing of the commencement of operations and estimates of market conditions.

These forward-looking statements and information reflect the Company's current views with respect to future events and are necessarily based upon a number of assumptions that, while considered reasonable by the Company, are inherently subject to significant operational, business, economic and regulatory uncertainties and contingencies. These assumptions include: our mineral reserve estimates and the assumptions upon which they are based, including geotechnical and metallurgical characteristics of rock confirming to sampled results and metallurgical performance; tonnage of ore to be mined and processed; ore grades and recoveries; assumptions and discount rates being appropriately applied to the technical studies; estimated valuation and probability of success of the Company's projects, including the Malmbjerg molybdenum project; prices for molybdenum remaining as estimated; currency exchange rates remaining as estimated; availability of funds for the Company's projects; capital decommissioning and reclamation estimates; mineral reserve and resource estimates and the assumptions upon which they are based; prices for energy inputs, labour, materials, supplies and services (including transportation); no labour-related disruptions; no

unplanned delays or interruptions in scheduled construction and production; all necessary permits, licenses and regulatory approvals are received in a timely manner; and the ability to comply with environmental, health and safety laws. The foregoing list of assumptions is not exhaustive.

The Company cautions the reader that forward-looking statements and information include known and unknown risks, uncertainties and other factors that may cause actual results and developments to differ materially from those expressed or implied by such forward-looking statements or information contained in this news release and the Company has made assumptions and estimates based on or related to many of these factors. Such factors include, without limitation: the projected and actual effects of the COVID-19 coronavirus on the factors relevant to the business of the Corporation, including the effect on supply chains, labour market, currency and commodity prices and global and Canadian capital markets, fluctuations in molybdenum and commodity prices; fluctuations in prices for energy inputs, labour, materials, supplies and services (including transportation); fluctuations in currency markets (such as the Canadian dollar versus the U.S. dollar versus the Euro); operational risks and hazards inherent with the business of mining (including environmental accidents and hazards, industrial accidents, equipment breakdown, unusual or unexpected geological or structure formations, cave-ins, flooding and severe weather); inadequate insurance, or the inability to obtain insurance, to cover these risks and hazards; our ability to obtain all necessary permits, licenses and regulatory approvals in a timely manner; changes in laws, regulations and government practices in Greenland, including environmental, export and import laws and regulations; legal restrictions relating to mining; risks relating to expropriation; increased competition in the mining industry for equipment and qualified personnel; the availability of additional capital; the ability to source and negotiate supply and offtake agreements with qualified counterparties on terms that are economic or at all; title matters and the additional risks identified in our filings with Canadian securities regulators on SEDAR in Canada (available at www.sedar.com). Although the Company has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated, described or intended. Investors are cautioned against undue reliance on forward-looking statements or information.

These forward-looking statements are made as of the date hereof and, except as required by applicable securities regulations, the Company does not intend, and does not assume any obligation, to update the forward-looking information. Neither the NEO Exchange Inc. nor its regulation services provider accepts responsibility for the adequacy of this release. No stock exchange, securities commission or other regulatory authority has approved or disapproved the information contained herein.
